

Assembly instruction

Preparation

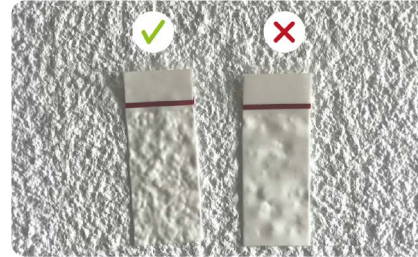

Have you cleaned the wall? Clean the wall by using a soft cotton cloth dampened with lukewarm water. Do not use any cleaning agents.

STEP 1 of 3

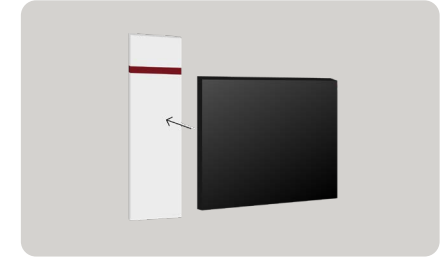

Hold the mould against the wall and place the strips in the recesses. Press each part of the strip for 5 seconds. **Do not rub it.**

PAY ATTENTION!

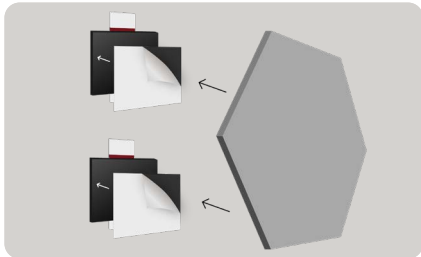

Do you have a textured wall? Then massage the strips well into the texture of the wall with 1 finger.

STEP 2 of 3

Stick the magnet horizontally with the white side against the red line of the strip.

STEP 3 of 3

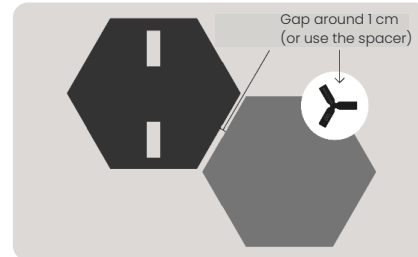

Click the thin black (or white) plate against the magnet and then remove the protective layer. Now stick the first wall element against the two plates. Make sure that the plates are in the middle.

PAY ATTENTION!

Expansion

Use the mounting template again to stick the strips for your next wall element(s). Use the spacing template or leave a distance of about 1 cm in between.

Removal

Grab the tab and pull it up the wall. Hold the magnet with your other hand so that it doesn't slip away. Do this **slowly** and **carefully**.

Disclaimer

All of our Modulari products are made from the strongest materials, and each design is carefully assembled and checked. The provided instructions have been thoroughly tested on various walls and surfaces. However, as a precaution, we would advise all of our customers against mounting the product on a wall where it could fall on someone or something. If any doubts arise, we can offer further advice.
